English

VISOR FOR NO LIMIT AIR SPORTS HELMET

CHARACTERISTICS

The CHARLY No Limit Visor is made of polycarbonate and is therefore break resistant and of the highest optical quality. Whether clear or toned, it offers 100% UV protection. It is also ideal for spectacle wearers, as it can replace additional sunglasses when worn over spectacles.

The visor features anti-reflective and anti-scratch coatings on the outside, and an anti-fog coating on the inside.

The extra wide field of vision is an important safety feature. The visor fits perfectly into the helmet contours and makes a measurable contribution to reducing aerodynamic drag.

MOUNTING ON THE HELMET

The visor is screwed to the designated threads in the helmet shell using special fastening screws.
Please note: Both screws should be tightened so that the ratchet insert fully rests against the helmet. Too much tightening of the screws can damage the visor and/or impair its functionality!

CLEANING

Important: To avoid damaging the sensitive anti-fog coating, the visor should be rinsed under running water only (without the use of detergent!). Subsequently, you can pat it dry with a clean, soft cloth. Do not rub!
